EDUCATION

RV College of Engineering (RVCE) | Bengaluru, India
Bachelor of Engineering in Computer Science and Engineering | Expected Graduation: July 2029

- **CGPA:** 9.85 / 10.0 (Up to 2nd Semester)
- **Relevant Coursework:** Data Structures, Algorithms, Object-Oriented Programming, Discrete Mathematics.

Sri Gulab Rai Montessori Senior Secondary School | Bareilly, India
Class XII (CBSE) | PCM with Computer Science | Percentage: 96.2% | May 2025

TECHNICAL SKILLS

- **Languages:** C, C++, Python, HTML, CSS, JavaScript.
- **Tools & Frameworks:** Git, GitHub, VS Code, React, Vercel, Render

PROJECTS

AI Resume Analyser | *Technologies Used: Python, Flask, spaCy, SQLite, JWT, Vercel* | Feb 2026 – Present
Live Demo ***GitHub***

- Developed a live, NLP-driven screening platform that identifies exact candidate skill gaps across 1,700+ engineering terms and generates personalized learning roadmaps utilizing a database of 5,400+ active resource links.
- Implemented an intelligent OCR extraction pipeline (PyMuPDF + Tesseract) and in-memory query caching, accelerating batch processing speeds by 80% for the active Vercel deployment.
- Utilized a modular Flask REST API, SQLite, and custom HMAC-SHA256 JWT middleware to securely handle user authentication, historical score persistence, and dynamic mock interview generation.

Nexus Event Registration Portal | *Node.js, Express, PostgreSQL, Prisma, TypeScript, JWT* | June, 2026
Live Demo ***GitHub***

- Built a full-stack, high-concurrency event registration Single Page Application (SPA) featuring distinct role-based access for students and gate volunteers.
- Designed a robust backend architecture using PostgreSQL and Prisma ORM, resulting in seamless data processing during simulated 2,000 requests-per-minute traffic spikes with zero database locks.
- Overcame physical gate check-in bottlenecks by integrating the html5-qrcode library directly into the organizer dashboard, enabling secure, real-time ticket validation via device hardware cameras.

eConfMate (Conference Management System) | *Technologies: React.js, JavaScript, HTML/CSS, Git* | May 2026 – July 2026

- Collaborated with a team of developers to build and scale a comprehensive conference management platform utilized for university events.
- Designed and developed the frontend UI for the Conference Scheduler, building the presentation layer and branded PDF export templates to visualize multi-day event schedules, venues, and rooms.
- Built the Document Export control panel in React, engineering dynamic state management for format toggles (PDF/XLSX) and data status filtering.

COMPETITIVE PROGRAMMING & ACHIEVEMENTS

- **LeetCode:** Solved 440+ problems with around 190+ days current streak (Top 1.2% globally).
- **Hackathons & Events:** Built a working prototype of PitchTrial (Multi-AI SharkTank) in 24 hours at Nebius x NovaHackathon. Participated in Hackemon 2.0 (Coding Club) and Team DHI Prompt Masters at RVCE.

EXTRACURRICULAR INVOLVEMENT

Coding Club | RVCE
Member | Dec 2025 – Present

- **Development Team Lead for CloneFest 2.0** (Currently Live): Spearheading a 5-member technical team to build and maintain the event's digital infrastructure.
- Coordinating feature deployments, delegating technical tasks, and ensuring platform stability for an event targeting 180+ participants.
